

Complete EMR Solution

Ergo's EMRitus is a complete Electronic Medical Record (EMR) system. EMRitus allows medical professionals to efficiently manage the immense amount of patient information. From patient management and clinical documentation, to medications and outcome measurement, EMRitus helps you reduce administrative costs and improve patient care.

EMRitus has the functionality and flexibility needed to adapt to your clinical documentation needs. EMRitus has been in use in the US and UK by physicians, nurses, aides, and EMT's in settings from hospitals and clinics to ambulances.

Key Benefits

- Easy to learn and use
- Quick implementation
- Low cost of ownership
- Increased efficiency
- Improved patient care
- Strategic clinical insight
- Flexible and customizable

EMRitus' Patient Management

Outcome Based Vocabulary

A comprehensive selection of researched clinical languages is the basis of EMRitus. This provides in-depth clinical documentation of the patient encounters for all health care disciplines in all health care settings. Physicians, physicians' assistants, nurse practitioners, nurses, therapists, and aides can all use EMRitus to facilitate a complete patient medical record.

Customizable For Your Workflow

EMRitus ships with a comprehensive set of templates and easy to use tools to customize the templates or create new ones to fit your workflow. You can customize user, specialty, organization, and facility specific templates.

EMRitus easily communicates with other software applications including practice management systems. It fully supports the import and export of HL7 messages, the worldwide standard for data sharing between healthcare software products.

EMRitus' Treatment Plan

Quick Implementation and Set up

Implementation can be completed progressively at a pace that reflects your timescale. EMRitus makes converting from paper-based patient records to electronic records simple and efficient with our integrated Document Conversion solution.

EMRitus can be implemented using any combination of wireless, LAN, WAN and disconnected clients. It can be easily configured and is almost infinitely scalable.

Complete Solution

EMRitus has a complete set of implementation and user documentation. Training is provided on site for IT staff and clinical and administrative users. Online training and support are also available.

About Ergo Partners

Ergo Partners has been developing EMR software solutions for over 8 years. Ergo's EMR solution, EMRitus, has been developed in collaboration with a team of physicians and nurses. Clinicians experienced in ambulatory medicine, acute care medicine and home health care were the architects of EMRitus. EMRitus creates a new paradigm for the way in which clinical encounters are organized by combining ease of use with the rich granularity of clinical data.
